PROFESSIONAL SUMMARY

My journey at a software development agency has immersed me in diverse projects, from finance to gaming and more, making me hone my ability to deliver high-quality, reliable products under tight deadlines, while maintaining clean, maintainable code. Below are the list of the adventures I have been up to in corporate organizations, and more of my projects can be found in my portfolio, which is attached above.

Mobile & Web Frontend Engineer

Monieswitch

February 2024 - Present

- Built the user-facing platform for Monieswitch partners, thereby helping the business onboard business partners who can manage their own merchants yus.
- Maintaining the Partners' portal and squashing known glitches as they are identified.
- Worked independently with minimal supervision, demonstrating strong problem-solving skills.

Frontend Engineer

Herlabytes Technologies (Software Development Agency)

April 2022 - January 2024

- Developed frontend systems for various industries, majorly fintechs, gaming (startups and giants) having tens of thousands users, learning the DOS and DONTs of building standard platforms that scale with time.
- Optimized existing codebases for high-volume transaction dashboards, implementing caching where necessary, resulting in a huge reduction in load times and as a result a better user experience.
- Integrate modular design systems thereby accelerating delivery of high-quality, with the sole aim of having a system that can be detached easily from one another just in case a feature is not rolling out with the others.

Stack include HTML, CSS, Tailwind CSS, JavaScript, TypeScript, React, React Native, Next.js, Jest, React Testing Library, React Query, GIT, GitHub, Socket.io
